Oliveri Pastisserie

When light becomes soft

LOCATION: Arzignano, Vicenza - Italy

YEAR: 2016

PROJECT: Studio [A+M]² Architects

The Olivieri patisserie is part of a very large project by the studio [A+M]² Architects for the redevelopment of a run-down industrial area. The

goal of the project was to revitalize a reality with great potential at a social level, given its multi-ethnic nature.

The materials used are coherently linked to the industrial tradition: cement, corrugated iron, perforated sheets and marble contribute to providing a new reading to this area without spoiling it. The result

is a refined and at the same time minimalist climate, which gives visual comfort, a familiar atmosphere, and presents itself as an excellent combination of performance and design.

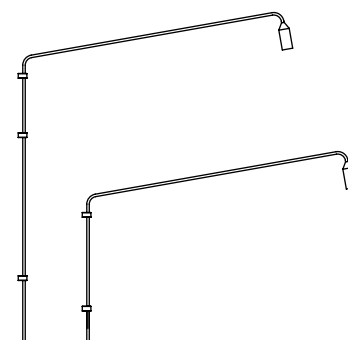

For the lighting, Platek products with sober geometric shapes were used, such as the Flamingo applique, capable of harmonising perfectly with the surrounding environment, which is characterised by an extremely linear architecture,

giving in its simplicity a great corroboration of modernity. The light beam created by the applique gives that welcoming touch to a structure that is austere on first impact, but which nevertheless immediately turns out to be captivating.
